**DETAILED ACTION**

**CLAIMS OBJECTION**

1. Claims 6-7, 13-14, 19-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art of record as the prior art fails to teach or suggest the character identifier including one data byte or a multiple byte identifier in combination with other limitations as recited in independent claims and further in view of the specification.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-5, 8-12, 15-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Chang et al. (Pub. No. US 20020062406)

As per claims 1, 8, Chang discloses a method for transmitting arbitrary font data to an output device, said method comprising:

- determining whether rendering information for the font data to be transmitted is resident on the output device; and [0062-0069], [0080-0096], [0108]

- if the rendering information for the font data to be transmitted is not resident on the output device, transmitting to the output device rendering information for the font data to be transmitted. [0062-0069], [0080-0096], [0115-0120]

As per claim 15, Chang discloses an apparatus comprising:

- a processor; (fig.10B, 1002)
- a memory coupled to said processor,(fig.10B) and storing computer code implementing a method of transmitting arbitrary font data to an output device wherein upon execution of said method on said processor, said method comprises: [0080-0085], [0115-0120]
- determining whether rendering information for the font data to be transmitted is resident on the output device; and [0062-0069], [0080-0096], [0108]
- if the rendering information for the font data to be transmitted is not resident on the output device, transmitting to the output device rendering information for the font data to be transmitted, wherein the rendering information comprises glyph information and bitmap data associated with an image. [0062-0069], [0080-0096], [0115-0120]

As per claims 2, 9, 17, Chang discloses the output device comprises a printer.

[0037]

As per claims 3, 10, Chang discloses wherein the rendering information for the font data to be transmitted comprises glyph information and bitmap data associated with an image. [0062], [0104]

As per claims 4, 11, 16, Chang discloses wherein the rendering information for the font data to be transmitted further comprises position data specifying a location for rendering the image. [0033], [0065]

As per claims 5, 12, 18, Chang discloses wherein the font data to be transmitted comprises a character identifier associated with a character image. [0062], [0104]
